CARMA
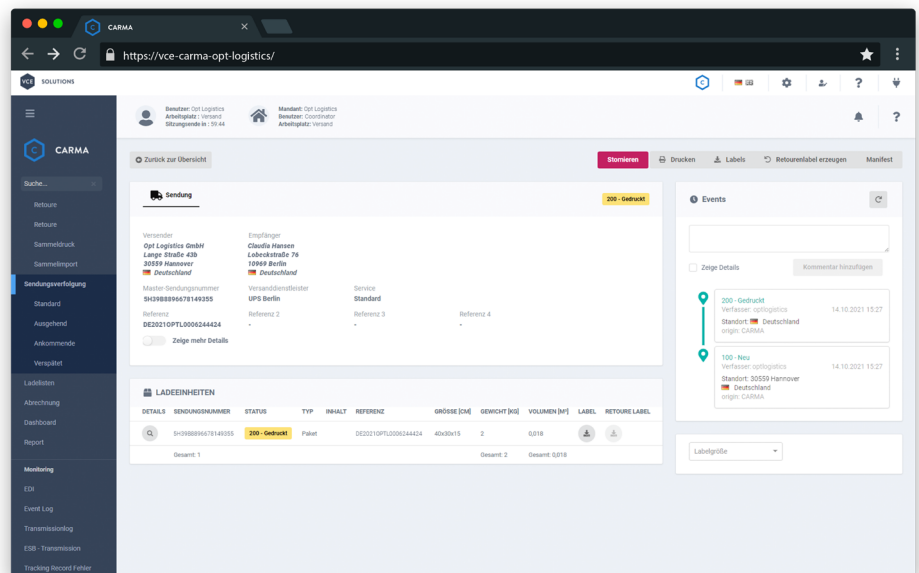

- Efficient and smooth shipping processes
- Integration of marketplaces and own webshops
- Selection of the requested carrier and the best tariff
- Real-time delivery status
- Reliable planning through ETA calculation
- Direct ATLAS integration
- Web-based application
- Provided in German and English, any other language can be integrated

VCE SOLUTIONS

Multi Carrier Management

The complete shipping process in a single system

With the carrier management module VCE CARMA, the shipping process becomes as simple as it can be. As a complete package, the digital shipping platform takes care of the entire process. The selection of the requested carrier and the best tariff offer significant cost savings and the quality increase of the shipping services.

Track&Trace makes the supply chain as well as parcel and returns tracking traceable in real time. In addition to increased transparency, VCE CARMA offers maximum flexibility through the smooth integration of marketplaces and webshops. As a web-based application, the module enables fast and easy access to all shipments at any time from anywhere in the world.

Overview of shipment tracking and loading units in detail incl. progress display.

With additional functions such as the printing of shipping labels in a fraction of a second in the desired format up to the customs declaration through a direct ATLAS integration, VCE CARMA ensures a frictionless and automated shipping process.

As a stand-alone module, the application offers a comprehensive shipping platform and can be individually combined with other VCE Solutions modules. A cross-interface connection to existing IT systems is also possible. In addition, customer-specific extensions and adaptations can be made to cover individual processes.

CARMA

All functions at a glance

One system, all carriers

- Cooperation with all common transport service providers, both CEP service providers and forwarding agents
- Carrier monitoring and rating
- Reliable planning through ETA calculation
- Shipping label printing in under 5 ms

One platform, all marketplaces

- Integration of marketplaces like Amazon, eBay, Rakuten etc. and own webshops
- Shipping between stores (cartons, pallets, hanging garments, etc.)
- Simplified customs declaration through direct ATLAS integration
- Interface for upstream systems such as WMS or ERP

Track&Trace

- Delivery status in real time centrally bundled and clearly arranged
- Event-based tracking notifications
- Transparency through returns tracking and Proof of Delivery (POD)
- Return handling via service portal or direct provision of the label
- Optional different carrier for shipping and return delivery

Web-based application

- No software installation, simply log in via web browser
- Highest security requirements and TLS protected
- Quick and easy access to all transports from anywhere in the world

---

- Software as a Service (SaaS)
- Cloud Native Architecture
- Own instance and cloud based managed by the VCE or on-premises hosting
- Customized Ø in 1-3 months
- Integration of individual micro-services to fit customer-specific requirements
- Trouble-free implementation to existing IT infrastructures
